SUMMARY

Full Stack Developer with experience in scalable web applications using .NET and Angular. Work on critical financial-sector systems with focus on scalable architecture, API integration and performance optimization. Information Systems undergraduate at Centro Universitário Una.

EXPERIENCE

Full Stack Developer

2024 — Present

Nexgs · Remote

Banco Original — AML/KYC Compliance Journey

- Horizontal AML/KYC compliance platform with decoupled rules engine, separating regulatory rules from bank risk policies.
- Immutable decision-event pipeline for audit and model retraining, consumed across onboarding, transactions and credit product journeys.
- KYC market service integrations with data normalization; operational dashboards and historical regulatory-impact simulation environment.
- Automated audit trail: decision-history queries went from per-case manual effort to structured queries in hours.

Grupo Suno — Multi-product technical foundation

- **Suno Core** — Consolidation of fragmented integrations between CRM, billing, authentication and content delivery into a single foundation; product launches shifted from multi-week cycles to configuration-only deployments.
- **Status Invest** — Three-layer data platform (ingestion → financial domain consolidation → public exposure), time-series storage with granularity-based retention and multi-layer caching with event-based invalidation.
- **Plataforma GPS (Assessoria)** — Per-organization multi-tenancy with logical isolation, separated execution/analysis layers for independent SLAs, and idempotent custody/brokerage integrations.

HubCred

- Credit fintech built from scratch with event-driven architecture as the backbone of traceability and scalability — distributed processing of credit decisions through immutable event streams.
- Multi-tenant platform with partner-level isolation, controlled sharding and event-based access policies, supporting multiple concurrent clients.
- Per-tenant configurable credit journeys without deployment; idempotent integrations with bureaus, digital signature and collection systems, with automated reconciliation.

IT Analyst

2023 — 2024

B2ML Sistemas · Remote

Started as Web Development Intern, promoted to IT Analyst in May/2024.

SafeTrace · Bayer PRO Carbono Commodities

- Java 17 + Spring Boot microservices for food traceability and inventory control.
- Producer data integration on PRO Carbono Commodities (Bayer).
- PostgreSQL and MongoDB schema modeling and optimization with JPA/Hibernate.
- TDD/BDD with JUnit, Mockito and Hamcrest, with high test coverage on critical deliveries.

EDUCATION

Bachelor in Information Systems

2023 — 2026

Centro Universitário Una

TECHNICAL STACK

BACKEND
